BULB CULTURE IN FIBRE.

GROWN IN ARTISTIC BOWLS AND VASES WITHOUT DRAINAGE.

A DELIGHTFUL and interesting method of cultivating bulbs is to grow them in our specially prepared fibre in ornamental vases, bowls or jardinières without drainage. The advantage of this system is that the vases can be placed anywhere about the house without fear of damage from moisture, as drainage with this culture is unnecessary. Any receptacle can be used provided it is non-porous and large enough to allow space for good root-growth. Our specially prepared fibre is fertilized and mixed with pulverized charcoal and crushed oyster shells. This combination furnishes all the plant-food elements required by bulbs, and only needs to be moistened with water before use. Almost any of the spring-flowering bulbs may be grown in our prepared fibre, but we consider the following varieties best suited for this purpose: Roman and Dutch Hyacinths, Narcissi, Jonquils, Early Tulips, Crocuses, Scillas, Freesias, Snowdrops, also Lily of the Valley Pips, Spireas, etc. It is better not to mix different varieties of bulbs in one bowl unless simultaneous flowering can be assured.

CULTURAL DIRECTIONS.

When growing bulbs in vases without drainage it is first necessary to water the fibre, then rub it through the hands until it is free from lumps. If the mixing is properly done the fibre will increase in bulk, and if taken in the hand and squeezed, little or no water should drop out. When potting, put a few pieces of charcoal in the bottom of the vase to absorb the impurities and keep the mixture sweet, then put in one to three inches of the compost according to the depth of the bowl. After placing the bulbs in position so that their tips reach to within half an inch of the rim, the spaces between and around the bulbs should be filled with the moistened fibre. It is not necessary or desirable to press it tightly, as the roots do not grow freely if it is pressed too firmly. Small bulbs such as Scillas, Crocuses, Snowdrops, Jonquils, etc., should be planted fairly close together in order to produce the best effect. After planting, the bowls should be kept in a cool, airy cellar or room (not a confined closet) for about eight weeks so that they may develop good root-growth which is very essential in order to get good results. The bowls should be examined once a week and a little water given when necessary, as the fibre must not be allowed to get dry or the flower buds become "blind." The surface should always look moist, but if too much water has been given, the bowl may be held carefully on its side so that the surplus water can drain away. As the growth increases more water will be required and as much light as possible to insure sturdy foliage. A succession of bloom may be had during the winter by taking into the house a few dishes at intervals of about two weeks.

Farquhar's Prepared Bulb Fibre, 50c. per peck, \$1.50 per bushel.

We carry in stock a variety of Ornamental Bowls suitable for growing Bulbs in fibre, price 40c. each and upwards.

NON-WARRANTY. We do not give as to description, quality, productiveness or any other matter, any warranty, express or implied, of any seeds, bulbs, plants, insecticides, fungicides, or fertilizers, which we send out. If the purchaser does not accept the goods on these terms, they are at once to be returned.

FARQUHAR'S BULBS FOR NATURALIZATION.

In Rock Gardens, Woodlands, Wild Gardens, Shrubberies, Etc.

The increasing practice of planting bulbs extensively in the Rock Garden, Woodlands, Wild Garden and among Grass produces an effect which is nearer to nature than any other style of gardening.

Daffodils, Snowdrops, Crocuses, Scillas, Chionodoxas, etc., growing amid such surroundings have a charm that is not to be found in the more conventional beds and borders of the cultivated garden. The following bulbous plants are especially suitable for natural plantations and when once planted hold their own and increase with little or no further care. Varieties preceded by a * are particularly adapted to the Rock Garden. A full description of the following varieties will be found in the body of the catalogue.

CULTURE OF HYACINTHS.

Hyacinths in Pots. It is important in the pot culture of the hyacinth to have rich, light soil—if possible, a compost of one-third decayed turf, one-third old rotten, cow manure, and the remainder equal parts of sharp sand and leaf-mould. This compost should be made a few weeks before being used. If the bulbs are to be potted singly, pots five inches in diameter are the proper size, and the special Hyacinth pots which are about two inches deeper than ordinary pots, are preferable. For drainage, cover the hole in the pot with a piece of broken pot, and over this place a layer of moss. Break off any offsets which appear at the base of the bulbs, and in potting place each bulb so that its top shall be half an inch below the surface of the soil and an inch below the rim of the pot. The soil should be of usual natural moisture, and should be pressed moderately firm. The filled pots may be placed in a cold frame where there is protection from frost, and well watered. An excellent plan is to place them on a bed of moist, sifted coal ashes, covering the pots to a depth of six inches with the same material. When well rooted, which will be in about six weeks, the bulbs may be brought indoors and forced. For the first two or three weeks they should be kept in a temperature not exceeding 50 degrees. Success in forcing depends much on their having strong roots before being brought to the light. The top grows rapidly, and unless the roots are started much in advance they are unable to nourish the plant, and failure results. Hyacinths for early use may be potted in September or October; late planting is not advisable, as the bulbs deteriorate; when desired for late use, it is better to pot them in October and keep them in a cold frame above freezing until it is desired to force them into bloom.

To obtain dwarf foliage and fine flower spikes, Hyacinths when being forced should have plenty of manure-water, fresh air, and should be kept very near the glass. The blooms last much longer if shaded from the sun.

Hyacinths in Glasses. The single varieties are, with a few exceptions, best adapted to this mode of culture; they produce finer flower spikes than the double. Fill the glass with clear, soft water, so as nearly to touch the base of the bulb, putting a small piece of charcoal in each glass to keep the water pure, and afford some nourishment. The filled glasses should be placed in a dry, cool, dark place, and kept there until the roots almost touch the bottom of the glass, when they may be exposed gradually to the light. If the water in the glasses becomes foul, or diminished, replace it with fresh water at about the same temperature as the atmosphere in which the bulbs are growing; otherwise it need not be changed. When well started, the bulbs should have plenty of light and air, without draughts, in order that the best development and brilliancy of color may be attained.

Hyacinths in the Open Garden. The ground should be dug to a depth of at least fifteen inches, and enriched with plenty of well-rotted cow manure. Hyacinths may be planted from September until winter sets in; although if the highest success is sought they should be in the ground by the end of October. Bulbs planted early develop roots in the autumn, and these, if protected from injury by freezing and thawing alternately during the winter, enable the bulbs to produce much larger flower spikes than if the roots are not developed until spring. Frost reaching the bulbs raises them up, thus detaching them from their roots. Protection may be afforded by covering the beds with straw or leaves to a depth of six or eight inches, which should be removed early in the spring. Hyacinths should be set six inches below the surface of the ground and six inches apart.

FARQUHAR'S SELECTED NAMED BEDDING AND FORCING HYACINTHS.

This highly decorative class of Hyacinths is of unsurpassed excellence for producing fine color effects in public parks and private grounds. Being of distinct and decided shades, of almost uniform height, and blooming at the same time, they admit of the most artistic grouping. They are also very desirable for forcing singly in pots or grouped in bulb pans.

LARGE UNNAMED HYACINTHS FOR BEDDING AND FORCING.

These are well developed, sound flowering bulbs, superior in size and strength to the Mixed Hyacinths usually offered. They are specially adapted for groups in borders and informal beds, where they will give a brilliant display of very handsome flowers and on account of their low price are also extensively forced for winter-blooming and cutting. Care is exercised to include only sorts which bloom at the same time and are of nearly uniform height.

R. & J. Farquhar & Co.

Gentlemen. Our tulips are a perfect glow. We have used our best judgment in the arrangement of colors, but we gladly give your house the credit for this beautiful show. In the last fifteen years we have planted from 6,000 to 10,000 of your bulbs each year, and we have never had a single error or a bulb that did not prove true to name and color. We heartily appreciate this.

Yours truly,

GEORGE M. FILLBROWN, Messenger.

THESE beautiful Hyacinths are indispensable to the florist in his autumn and winter cut-flower work; while to the amateur they are among the most easily cultivated and most satisfactory of flowering bulbs. The white variety, if planted early in September and gently forced, will bloom in November; the others require from two to three weeks longer.

When grown in pots or pans they are most effective planted in groups of six or more bulbs in each.

White. Extra Large. 60 cents per doz.; \$4.50 per 100; \$42.00 per 1,000.

White. Mammoth. 80 cents per doz.; \$6.25 per 100; \$60.00 per 1,000.

Pink. 50 cents per doz.; \$4.00 per 100; \$35.00 per 1,000.

Light Blue. 50 cents per doz.; \$4.00 per 100; \$35.00 per 1,000.

White Italian or Parisian. These are about a fortnight later than the Early White Roman Hyacinths and the blossoms somewhat larger. They are very useful for forcing, being fragrant and decorative. 50 cents per doz.; \$4.00 per 100; \$35.00 per 1,000.

Hyacinthus Candicans.

FARQUHAR'S SINGLE EARLY TULIPS.

If by mail, add 5 cents per dozen or 20 cents per 100.

Tulips are such universal favorites that it is scarcely necessary to dwell upon their merits here. In them we possess a range of colors and combination of shades which no other class affords; besides, the standard sorts are so reasonable in price that they can now be planted in quantity. For bedding, pot-culture and forcing for cut flowers in winter they are invaluable.

CULTURE. The cultural directions given for hyacinths on page 2 can be applied to Tulips, except that the bulbs being smaller must not be planted quite so deep. Four to five inches to the bottom of the bulb is deep enough and a distance of 4 to 6 inches between the bulbs is sufficient. They may be planted in October and November before the ground freezes. For pots, six to eight bulbs in a 7 inch pan is very satisfactory.

Farquhar's Rainbow Mixture Single Early Tulips, at the Harvard University Botanic Garden, Cambridge, Mass.

FARQUHAR'S RAINBOW MIXTURE. The varieties included in this mixture are grown separately, and are all popular large-flowered bedding sorts of decided merit. The colors are carefully proportioned, and include white, yellow, pink, scarlet, crimson and many beautiful shades and combinations of these colors. The sorts are selected to flower at nearly the same time and with slight variation in height. For massed beds and grouping our Rainbow Mixture is unsurpassed. The bulbs offered are of the largest size and finest quality. **35 cents per doz.; \$2.50 per 100; \$20.00 per 1,000.**

SUPERFINE MIXTURE. Extra quality bulbs in many beautiful and varied sorts, flowering nearly together. **25 cents per doz.; \$1.50 per 100; \$12.00 per 1,000.**

MESSRS. R. & J. FARQUHAR & CO., Gentlemen:—It gives me great pleasure to certify that I have grown your Rainbow Mixture for many years. It has always given most satisfactory results. Its greatest merit lies in the pleasing harmony of colors, the uniform height of the plants and all blooming at the same time. There is nothing better for large beds or for massing effects.

HARVARD UNIVERSITY BOTANIC GARDEN, CAMBRIDGE, MASS.

Yours respectfully

ROBERT CAMERON.

DOUBLE TULIPS.

A VERY ornamental and useful class, flowering usually about ten days or two weeks later than the Single Early Tulips. They are deservedly popular for bedding in both public and private grounds, the large double pæony-like blossoms being highly decorative and of long duration.

A Field of Double Tulips in Holland. Cutting Blooms for the Market.

Farquhar's Rainbow Mixture. This mixture is composed of the best named sorts of bedding Double Tulips, grown separately and put together in studied proportions, and contains a liberal allowance of the showy light colors. Per doz., 25 cents; per 100, \$1.75; per 1,000, \$15.00.

Superfine Mixture. Extra quality bulbs in a great variety of beautiful colors. Per doz., 20 cents; per 100, \$1.50; per 1,000, \$12.00.

NAMED DOUBLE TULIPS.

Double Tulips should be planted one sort in each bed, as grouping different varieties does not produce such a good effect. The varieties marked 1 generally begin to flower the last week in April, those marked 2 about one week later, and the latest to bloom are marked 3. The figures following the names indicate the average height in inches. Those marked * are the best for forcing.

FARQUHAR'S SINGLE MAY-FLOWERING OR COTTAGE GARDEN TULIPS.

THE May-Flowering Tulips are usually in full bloom about Memorial Day and generally last well into June. Not only do they prolong the Tulip season but in grandeur of form and richness of their colors surpass most of the earlier classes. They are splendid subjects for natural plantations, for clumps in herbaceous perennial borders as well as for formal beds. For cutting they are even better than the early tulips—the flowers being stronger and lasting longer.

DARWIN LATE SINGLE TULIPS.

If wanted by mail add 5 cents per dozen or 20 cents per 100.

THE colors range from the palest lilac to purplish black, including shades of rose, scarlet, crimson, violet, brown, white, etc. The Darwin Tulips are the strongest race of all, their massive leaves being often eight inches broad and their splendid flowers two to three feet in height. They bloom with the Columbines, three or four weeks after the Single Early Tulips. Clumps of them along the edge of shrubbery and in hardy plant borders are very effective. They are especially beautiful when cut for vases. The figure following the name indicates the relative time of flowering.

NARCISSI AND DAFFODILS.

If wanted by mail, add 10 cents per dozen.

Narcissus, Madame Plomp.

For Natural Plantations. This is the day of the natural garden, and the Daffodils are among its most charming subjects. Once planted there is no limit to their existence and they improve and multiply each year, provided they are replanted when after several years they become too crowded. There is not a single sort in the entire list that may not be advantageously used. The illustration on page 1 shows a plantation of Poeticus, one of the cheapest, yet most fascinating Daffodils. Other inexpensive forms suitable for such massing are Barri Conspicuous and many of the Leedsii and Incomparabilis sections, while the large trumpet varieties, many of which are likewise inexpensive, may be planted in comparatively small clumps with good effect. Each clump or mass should be of one variety—they should not be mixed—but the effect of planting a number of kinds each in a separate clump is most pleasing and extremely interesting.

For Formal Beds. The Daffodils are charming, too, planted in beds, especially when combined with an undergrowth of the blue Scilla Siberica, Forget-me-not, or other dwarf spring flowers. They should be planted in October or early in November. The bulbs should be set from four to five inches deep; the larger sorts five or six inches apart and the small varieties three to four inches. They should never be planted in very windy situations.

For Clumps in Hardy Plant Borders. Groups of Daffodils in borders of hardy herbaceous plants and along the edges of shrubbery beds are exceedingly effective and delicately beautiful.

For Greenhouse Culture. The commercial florists have been foremost to give the Daffodils the attention due them. They have learned how easily and successfully these lovely flowers may be forced into bloom during winter (even as early as Christmas), and how fascinating and lasting are the blossoms. They may be planted in pots or bulb pans six inches or more in diameter, several bulbs in each, according to size, and treated in the same manner as Hyacinths.

EARLY FORCING NARCISSI FROM SOUTHERN FRANCE.

These are not so strong as the Dutch grown Narcissi but are valuable for very early forcing. For Christmas forcing they should be potted in September.

NARCISSUS JONQUILLA OR JONQUILS.

The delicately graceful forms, delicious fragrance, and deep yellow color of their blossoms have made the Jonquils favorites of the amateur and necessities with the florist. They are easily forced, and if started early, may be flowered by Christmas, or even earlier. Plant six or eight bulbs in a six-inch bulb pan, covering the crowns half an inch, and treat them in the same manner suggested for hyacinths.

CHINESE SACRED NARCISSUS.

Joss Flower or Oriental New Year's Lily.

These may be grown in pots of earth, but are more interesting and very satisfactory in bowls partially filled with pebbles and water. As the roots develop they form a network about the pebbles, thus supporting the plant when in bloom. They should be started and grown in bright light, but carefully protected from draughts. The flowers are mostly white with yellow cups and are very fragrant.

FARQUHAR'S POLYANTHUS NARCISSI.

If by mail, add 10 cents per dozen for postage.

A VERY decorative class of bulbous plants for green-house and window cultivation, but not hardy out of doors in our climate. They produce enormous trusses of delicately fragrant flowers, varying in color from snowy white to deep yellow. Treat the bulbs in the same manner as noted for Hyacinths, except that the bulbs should be set half an inch deeper in the soil. They may be easily and quickly forced; our florists frequently have them in bloom by Thanksgiving.

POLYANTHUS NARCISSUS.

Early Large-Flowering Paper White. The largest, and most vigorous form of the *Paper White*; the best of all for very early forcing; pure white. They can also be grown in water with pebbles in shallow dishes and bowls, the same as the Chinese Sacred Narcissus.

Narcissus Poetaz Elvira.

Polyanthus Narcissus Paper White.

NARCISSI POETAZ HYBRIDS.

These new hybrids are the result of a cross between *Poeticus Ornatus* and *Polyanthus Varieties*, and are strong, healthy growers. They have a delicious fragrance of the former, combined with the free-flowering qualities of the latter, each stem carrying from three to six flowers. The bulbs are quite hardy and if planted in permanent groups in the hardy garden soon form large, luxuriant clumps. They can also be grown in pots for winter flowering.

CROCUSES.

THE bulbs should be set three inches deep, and should be planted in October or early in November to insure success. They are very effective when combined with Snowdrops, Scilla Siberica, Chionodoxa Luciliae, Daffodils, and other Spring flowers. For a natural effect they can be scattered in handfuls and planted where they lie. Crocuses may also be grown indoors either in pots or bulb pans in loam, or in dishes filled with wet moss in which the bulbs are set closely, half an inch below the surface.

LILIES FOR THE OPEN GROUND.

If Lilies are wanted by mail add 5 cents each.

TWO RARE LILIES FROM CHINA.

**HARDY, BEAUTIFUL, FRAGRANT.
THE FINEST NOVELTIES EXTANT.**

Lilium Myriophyllum. Mr. E. H. Wilson, the famous plant collector, collected for us the bulbs now offered, in North-Western China. He considers this the finest of all lilies. It is absolutely hardy, and is excellent for forcing. It has been predicted that this will become the Easter Lily of the future, and being so hardy, may be grown at home. The flowers are white, slightly suffused with pink and with a beautiful shade of canary yellow at the centre, and extending part way up the trumpet. It is delightfully perfumed, reminding one of the jasmine, and lacking the heavy oppressive odor of most lilies. Blooms out of doors early in July. Awarded a Gold Medal by the Massachusetts Horticultural Society, and a first-class certificate by the Royal International Exhibition, London, 1912. Bulbs, ready in October, each, \$1.50; dozen, \$15.00.

Lilium Sargentiae. The bulbs offered were also collected by Mr. Wilson. This is one of the strongest growing lilies—frequently attaining a height of six to eight feet. The flowers vary in number from five to ten on a stalk, and in size and shape resembling *Lilium Harrisii*, greenish white, shaded purple on the outside, and of the purest white within, with a tint of citron in the centre. The flowers have a pleasing fragrance. This lily will undoubtedly be largely used for outdoor planting as well as for forcing. Many consider it the finest of all tubular-flowered lilies. It flowers somewhat later than *Lilium myriophyllum*, and being of larger growth, has a distinct place. Awarded a Silver Medal by the Massachusetts Horticultural Society, 1912. Bulbs, ready in October, each, \$1.50; dozen, \$15.00.

SPECIAL NOTICE. Many of the late-flowering lilies cannot be shipped from Japan until October, and to save our customers the annoyance and expense of making shipments as they arrive, we have decided to send all the early varieties, approximately September 15-30. The late sorts, being subject to delays of steamers, etc., will be forwarded early in November, or as soon thereafter as they arrive. We advise the preparation of the Lily-beds or borders early in autumn, covering them with four to six inches of leaves or other litter, to prevent the ground freezing until the bulbs arrive. The late sorts comprise the following: *Auratum*, *Batemanni*, *Krameri*, *Henryi* and *Speciosum*.

	Each	Doz.	100
Auratum. (<i>Golden-rayed Japanese Lily.</i>) Flowers 6 to 8 in. in width, pure white, with a wide band of gold running through the centre of each petal; and numerous crimson spots. Extra large bulbs	So. 25	\$2.50	\$20.00
Auratum platyphyllum. Flowers very large, pure ivory-white, with a stripe of gold in each petal	.40	3.50	27.00
Auratum Vittatum Rubrum. Flowers pure white, with broad crimson band in the centre of each petal; numerous crimson spots	.60	6.50

A Group of Native Lilies.

Six bulbs of one variety sold at dozen rate; 25 at 100 rate.

LILIES FOR FORCING.

If wanted by mail, add 5 cents each.

THE bulbs may be potted from August onward in a compost of equal parts turfy loam, leaf mold, rotten cow manure, and sand. It is best to start them in pots not exceeding twice their own diameter, in which they may remain until started eight inches or more. They should be transferred then to larger pots in which to bloom, exercising great care not to disturb the roots or break away the soil from about them, and setting them considerably deeper in the larger pots. This method prevents the soil from becoming sour, and enables the roots forming at the base of the stem to become feeders, greatly increasing the number and size of the blossoms.

LILIUM CANDIDUM. (*Ascension or English Lent Lily.*)

THESE are grown for us in the north of France, and are the large, thick-petalled variety, with pure white flowers; excellent both for forcing and open garden.

First Size Bulbs. 15c. each; \$1.50 per dozen; \$9.00 per 100; \$85.00 per 1,000.

GERMAN IRISES. *Iris Germanica. True Fleur de Lis.*

Farquhar's German Irises were awarded a silver medal by the Massachusetts Horticultural Society, June 7, 1913.

German Irises thrive in a well drained and sunny situation and the finest blooms are obtained from established clumps, consequently when planted they should remain undisturbed for at least five or six years. The plants may be given a light covering of leaves or salt hay (not manure) during winter. When transplanting barely cover the rhizomes.

In the descriptions (S) is used to signify standards or the erect petals; (F) falls or the drooping petals.

Each, 15 cents; dozen, \$1.50; 100, \$10.00 (except where otherwise priced).

MISCELLANEOUS BULBS.

AMARYLLIS.

Amaryllis Hippeastrum.

ACHIMENES.

Profuse blooming tender perennials for greenhouse or conservatory decoration during summer. The scaly tubers should be potted in the early spring in a compost of turfy loam, leaf mould and sand. They should be grown in a moist, warm temperature, shaded from the sun until they begin to bloom, when they should be kept cooler to prolong the duration of the flowers. The colors comprise white, shades of lilac, mauve, and red. *Ready in December.*

Argus, Mauve; **Celestial**, pure white, spotted violet; **Dazzle**, Bright vermilion, dwarf; **Rosea elegans**, Rose; **Dr. Carey**, Pale rose, large; **Edmond Boissier**, white shaded, lilac; **Longiflora**, clear blue; **Margarita**, pure white; **Mauve Perfection**, clear mauve; **Patens Major**, mauve with violet shading; **Violacea**, violet with carmine shading, dwarf; **Vivid**, scarlet.

Each of the above separate colors, \$1.00 per doz.; \$6.00 per 100.

Mixed Varieties. All colors. 75c. per doz.; \$5.00 per 100.

AGAPANTHUS. (*African Lily.*)

Handsome summer and autumn flowering plants, throwing up large umbels of twenty to thirty blossoms. They should be grown in pots or tubs, in rich sandy soil well enriched. The plants should be divided before they become overcrowded in the pot or tub. They are particularly suitable for piazza or terrace decoration, and may also be forced in the greenhouse.

Umbellatus. Bright blue. Each, 25c.; per doz., \$2.00; by mail, 35c. each.

Umbellatus Albus. White. Each, 25c.; per doz., \$2.00.

ALLIUMS.

Attractive hardy spring-flowering plants of the easiest culture, succeeding in any soil; particularly adapted for borders and rockeries.

Aureum. (*Moly.*) Bright yellow flowers, very showy. Per doz., 15c.; per 100, 75c.; per 1,000, \$6.00.

Azureum. Deep azure-blue flowers in large umbels. Per doz., \$1.00; per 100, \$6.00.

Neapolitanum. Large heads of pure white flowers, very hardy; extensively forced by florists for cutting purposes. Per doz., 20c.; per 100, \$1.00; per 1,000, \$8.00.

Ostrowskianum. A beautiful variety from Asia Minor, with large umbels of rosy-scarlet flowers; hardy and early. Per doz., 25c.; per 100, \$2.00.

IN order to obtain fine specimens of Amaryllis, the following method should be observed: On receipt of the bulbs in the autumn they should be placed where they will be always slightly moist and warm, under the benches of a greenhouse, for example; do not pot up the bulbs before the flower buds appear; when first potted give very little water, and promote growth by giving moderate bottom heat; increase the supply of water as the plants progress. Very often the mistake is made that bulbs are potted up too early; the consequence is that only leaf growth is made. The proper soil for Amaryllis is turfy loam enriched with rotten manure.

Belladonna Major. (*Belladonna Lily.*) Flowers silvery white, flushed and tipped with deep rose; extra large bulbs

Equestris. (*The Barbadoes Lily.*) Scarlet, with broad white stripes; free bloomer

Formosissima. (*Jacobean Lily.*) Dark crimson

Hippeastrum, New Hybrids. (*Vittata.*) The finest race of Amaryllis in cultivation; exceeding in the size and fine form of their flowers, as well as in the diversity of colors and markings, all former hybrids. The segments are of nearly uniform size, giving the flowers a regular trumpet form

Johnsoni. (*Bermuda Spice Lily.*) Enormous bright crimson flowers with a white stripe through each segment; magnificent

Lutea. (*Sternbergia.*) (*Mount Etna Lily.*) Golden yellow; hardy if well covered during the winter

Hallii. (*Lycoris squamigera.*) Bright rosy-lilac flowers, fragrant, 3 or 4 inches across, blooms in August. The foliage appears in spring, disappears in June, and is followed two months later by the naked flowers. Hardy if protected

ANEMONES.

NONE of the spring flowers surpass the Anemone in brilliancy of color and profusion of bloom. They are very lasting, and have of recent years become very popular for cut-flower use and for table decorations. The florists now buy thousands of them to force. Plant in October or November, six roots in a six-inch pot or bulb pan, covering them one inch. They may be kept in a cellar or frame protected from frost until spring, when they may be placed in the greenhouse or window to bloom.

Gladiolus Blushing Bride.

GLADIOLI. EARLY FLOWERING.

THESE Gladioli are now extensively used by gardeners and florists for winter forcing; the dwarf, branching gracefully-formed flowers being excellent for cut-flower use. If the spikes are cut and placed in water when the first blossoms appear, they will keep expanding and remain beautiful for a week or two. Five or six bulbs planted in six-inch bulb-pans or pots make charming groups for conservatory or window decoration; the bulbs should be set an inch and a half deep. *Ready in November.*

The following varieties may be planted in autumn in the open ground if mulched sufficiently to exclude frost, or they may be kept in moist earth in a cellar or pit during winter and planted in the open ground about the middle of April.

LILY OF THE VALLEY.

(*Convallaria*.)

Ready in November.

FOR open ground planting we offer large clumps, each containing many flowering crowns. These may be set from six inches to a foot apart and covered three inches. They succeed best in ground which is rather moist and partially shaded.

For forcing the Pips are to be preferred, being grown under conditions tending to promote vigorous and early blooming. Twelve to eighteen pips may be planted in a 6-inch pot, with all the fibrous roots carefully preserved, and keeping the crowns above the soil. Place them in a temperature of about 80 degrees, cover the crowns with loose moss, and keep them constantly moist with tepid water. They should flower in about five weeks.

Our Exhibit of Lily of the Valley at the Massachusetts Horticultural Society's Spring Exhibition.

TROPÆOLUM.

Charming climbing plant for pot cultivation in the conservatory window; with delicate foliage and elegant flowers. The plants are usually trained over balloon-shaped trellises. Plant three or four bulbs in an eight-inch pot, covering them one and a half inches.

Jarrattii. (Tricolorum.) Scarlet, yellow, and black. Each, 15 cents; per dozen, \$1.50; per 100, \$12.00.

VALLOTA PURPUREA. (The Scarborough Lily.)

A beautiful free-flowering summer and autumn blooming Amaryllis producing strong spikes of brilliant scarlet flowers. If a number of bulbs are planted in a 10-inch pot they form very decorative plants for the piazza or lawn. They also make excellent house plants. Each, 25 cents; dozen, \$2.50; per 100, \$20.00.

WATSONIA.

Ardernei. This new white variety was recently introduced from South Africa and is likely to become very popular. The bulbs resemble gladioli, sending up stems to a height of 3 to 4 feet, each stem bearing about a dozen snow-white flowers. Fine for forcing in the greenhouse or planting out doors in spring like the gladioli. Each, 20 cents; dozen, \$1.75; per 100, \$12.00.

Trillium Grandiflorum.

FARQUHAR'S GOLD-MEDAL PÆONIES.

The Gold Medal of the Massachusetts Horticultural Society was awarded to R. & J. Farquhar & Co. for a Display of Pæonies, June, 1913.

SEPTEMBER is the best month in which to plant Pæonies, as they then make a root growth before winter and bloom next spring, thereby gaining a whole year, as spring plantings will not flower until a year later.

They require a good, rich, deep soil and an abundant supply of water during the growing season. When enriching the ground the use of too much fresh manure near the roots should be avoided. An important point to observe is not to plant too deep. The roots should be planted so that the eyes will be 2 to 3 inches below the surface. Too deep planting is a frequent cause for shy flowering.

Of many sorts we offer 4-year clumps, which are likely to yield from six to ten blooms the first season.

The figure following the name indicates the relative time of flowering:

To secure the best quality, orders should be placed not later than January 1st, 1915

STRAWBERRY PLANTS.

All the varieties offered are perfect-flowering (bisexual) except where marked P. The latter are pistillate and require a row of a perfect-flowering sort planted every 8 or 10 feet to pollinize their blossoms.

These, if planted in July and August, produce a large crop the next summer. Being grown in pots they may be shipped to a distance and planted with almost no interruption to their growth. The plants may be set in beds of three rows one foot apart and one foot distant in the rows, with a space of two and one-half feet between the outside rows of adjoining beds left for a pathway. They may also be planted in single rows three feet apart and one foot apart in the rows.

POT-GROWN PLANTS. From 2½ in. pots, well rooted; delivery in July and August. Per 100, \$3.50; 250, \$8.00; 500, \$15.00; 1,000, \$30.00; for all varieties, except where otherwise priced.

FIRST EARLY.

Alpha. A new very early variety, producing strong, vigorous plants which are very productive. The fruit is of large size, attractive color and fine quality. \$4.00 per 100; \$38.00 per 1000.

Early Ozark. One of the most productive early varieties, producing large dark-red berries of rather acid flavor but very delicious. The plants are of vigorous growth with fine dark-green foliage.

Excelsior. This is decidedly the best early Strawberry and the earliest good strawberry. The fruit is of round conical form, glossy, dark-red color, and of mildly acid flavor.

Success. Large, round, bright scarlet, flavor always fine.

St. Louis. A very productive, early variety, with large berries, similar to Excelsior. The plant is of vigorous growth and a good sort for the home garden.

Suburban. This berry is exceedingly productive, thriving well on light land, and is considered one of the best new sorts. Fruit large, conical, firm and of good flavor. \$4.00 per 100; \$38.00 per 1000.

SECOND EARLY.

Climax. This is an extremely popular new variety, immensely productive, the berries being slightly over medium size. Plant vigorous, healthy grower, of a peculiar shade of green that can be distinguished from other varieties.

Glen Mary. Large, conical, bright red berries; firm and of fine flavor.

Abington. A strong growing native variety of recent introduction. The fruit is of large size, bright red in color, very solid, excellent flavor.

Barrmore. This new strawberry was awarded a Silver Medal by the Mass. Hort. Society in 1908, for its excellence. The plants are of strong growth and very productive. The conical shaped berries are of medium size and of a dark, glossy, crimson color; the flesh is a rich red and very juicy. \$4.00 per 100; \$38.00 per 1000.

Brandywine. A large heart-shaped berry, perfect in form, bright red in color, firm flesh, red to the centre and of rich spicy flavor. A great cropper especially on heavy soils, holds its fruit well up from the ground and generally succeeds everywhere.

Bubach. P. A well-known popular variety, with large berries of a rich, bright red color.

Golden Gate. A strong growing variety bearing rich crimson fruit without green tips and with quality similar to the *Marshall*. It blooms early and late, making it a good variety to pollinize the pistillate sorts.

LATE TO VERY LATE.

Belmont. This old favorite is still considered by many to be the finest late berry. The fruit is of handsome appearance and keeps well.

Commonwealth. This is the latest of all Strawberries; bearing large conical, deep crimson fruit, sweet and of quality equal to the well-known Bubach. Not only an extra large berry, but also very productive, of deep rich color and solid. It is smooth and quite juicy.

Chesapeake. The plants of the Chesapeake are large and vigorous with rich dark green foliage. The fruit is of large size, deep red in color and of a rich aromatic flavor.

ENGLISH VARIETIES. \$1.25 per dozen; \$9.00 per 100. Ready August 1st.

British Queen. A popular English variety producing large, conical, pale-red berries.

Duke of Edinburgh. Late. Fruit irregular, but otherwise similar to British Queen.

Standard. Very early, small, dark-red berries of fine flavor; forces well.

NEW EVERBEARING STRAWBERRY.

Superb. A variety of recent introduction, producing large glossy, dark red berries of good quality. The plant is of compact growth and makes runners freely. When late fruit is desired it is better to pinch off the first flowers, and also keep the runners cut, which will give vigor to the later crop. 20c. each; \$2.00 per doz.; \$14.00 per 100. Ready August 1st.

A Pot-grown Strawberry Plant.

Sample P. Excellent for either market or home use; prolific, large, firm, and delicious.

Senator Dunlap. Mr. Crawford, at the time of its introduction by him, said that he doubted if he had ever sent out a berry better than Senator Dunlap. It will keep in fair condition for several days on the vines after being ripe enough to pick. The fruit is large, rich and dark red clear to the centre, with a very rich flavor.

MEDIUM.

King Edward. A very productive mid-season variety with large conical glossy-red berries of delicious flavor. The plants are of strong healthy growth with large dark-green foliage.

Longfellow. The plants of this fine new variety are of vigorous growth and very productive. Fruit highly colored, conical in shape and inclined to be long.

Marshall. The fruit of this remarkable sort is of enormous size, of handsome, glossy, dark crimson color, and of delicious flavor. It is one of the best midseason berries, either for private use or market. It is a vigorous grower and requires good soil and high cultivation. As it does not thrive in all soils, it should not be planted extensively until its adaptability is ascertained.

New York. One of the best sorts for private or market gardens. The berries are large, of conical form; dark red color, firm texture and of remarkably sweet flavor. In the market they sell at sight.

Nick Ohmer. Dark glossy red globular berries of superior flavor; fine for forcing.

Gandy. This popular old variety is probably known by most berry growers. It is more largely grown than any other late variety. On sandy soils it is unproductive.

Minute Man. P. A very productive sort, of fine quality.

Rewastico. A very productive new variety. The plants are of vigorous growth with an abundance of dark green foliage and producing uniformly large berries. Color a rich cardinal red penetrating to the centre. \$1.50 per doz.; \$12.00 per 100.

William Belt. An exceptionally fine berry. In quality it heads the list; berries are as large, with some specimens larger than the Bubach. Its color is a bright, glossy, deep red; season as late as Gandy.

President. The fruit is crimson in color and of superior flavor; good for forcing.

Royal Sovereign. This fine variety is regarded in England as the best for forcing, as it possesses all the qualities required in a good strawberry. Fruit large; conical and of a bright, glossy-red color.

- Invincible Scarlet.** Form globular; skin orange-red when perfectly ripe, finely and evenly netted; thick bright scarlet flesh, of exquisite flavor. Pkt., 50c.
- Blenheim Orange.** Well known handsome scarlet-flesh variety; of delicious flavor and beautifully netted. Pkt., 50c.
- MELON. Hero of Lockinge.** Fruit handsome, with white lacing on a rich yellow ground. Pkt., 50c.
- Emerald Gem.** Small; flesh orange. Pkt., 10c.; oz., 30c.
- MUSTARD. White.** Best variety for salads. Pkt., 5c.; $\frac{1}{4}$ lb., 15c.
- RADISH. Early Deep Scarlet, Olive-Shaped, Short Leaf.** One of the most desirable varieties for forcing. The skin is deep bright red. Pkt., 5c.; oz., 15c.; $\frac{1}{4}$ lb., 50c.
- Non Plus Ultra.** The earliest of all; short-leaved; brilliant red, good for forcing. Pkt., 5c.; oz., 15c.; $\frac{1}{4}$ lb., 40c.
- Early Scarlet Globe.** Admirable for forcing; deep scarlet; flesh white and tender. Pkt., 5c.; oz., 10c.; $\frac{1}{4}$ lb., 35c.
- Early French Breakfast.** Oval form; color scarlet with white tip. Pkt., 5c.; oz., 10c.; $\frac{1}{4}$ lb., 35c.
- SPINACH. Round Thick-Leaved.** A standard sort for fall sowing; leaves are thick, succulent, and tender. Pkt., 5c.; oz., 10c.; $\frac{1}{4}$ lb., 20c.; lb., 60c.
- Long-Standing.** Of delicious, tender quality; dark green leaves. Pkt., 5c.; oz., 10c.; $\frac{1}{4}$ lb., 20c.; lb., 60c.
- Savoy-Leaved, or Bloomsdale.** Large, tender, crumpled leaves. Pkt., 5c.; oz., 10c.; $\frac{1}{4}$ lb., 20c.; lb., 60c.
- Victoria.** The best long standing Spinach. Pkt., 5c.; oz., 10c.; $\frac{1}{4}$ lb., 20c.; lb., 60c.
- Prickly Seeded.** Very hardy and vigorous; leaves arrow-shaped. Pkt., 5c.; oz., 10c.; $\frac{1}{4}$ lb., 15c.; lb., 50c.
- TOMATO. Stirling Castle.** Excellent for forcing. Fruit is of medium size, reddish scarlet in color and of very delicious flavor. This variety sets very freely. Pkt., 25c.; $\frac{1}{4}$ oz., 75c.
- Hubert's Marvel.** This variety is a selection from Stirling Castle. The fruit is round, of medium size, and produced in very large clusters. Pkt., 25c.; $\frac{1}{4}$ oz., 75c.
- Lister's Prolific.** The clusters of fruit are borne in great profusion and are remarkable for the large number of fruits they carry. Fruits are of medium size, rich scarlet color. *Original Packet*, 25c.
- Farquhar's Bountiful.** A new forcing Tomato of superior flavor, perfect in shape, of good size and sets freely. The fruits are bright red in color, very solid and grow in clusters of 10 to 12. Pkt., 25c.
- ONION SETS. Egyptian or Perennial Tree.** These, if planted in the autumn, produce the well known *Scullion* so popular for salads in the early summer. Peck, \$1.25; quart, 25c.
- SEA KALE.** This delicious winter vegetable can be easily raised in a forcing bed or cellar. We are importing only large roots suitable for forcing this winter. *Delivery in December.* Forcing Crowns: per doz., \$1.50; per 100, \$12.00.

A Bed of Farquhar's English Milltrack Mushroom Spawn.

MUSHROOM SPAWN.

MUSHROOM SPAWN. English Milltrack. This Spawn is from virgin mycelium, germinated and developed under special scientific methods, and is not the uncertain material of the past, but is of uniform quality, prepared by the most successful and progressive mushroom specialist in England. We import every two or three months to ensure freshness. Per lb., 15c.; 8 lbs., \$1.15; 25 lbs., \$3.00; 50 lbs., \$5.50; 100 lbs., \$10.00; by mail, per lb., 25c.

FARQUHAR'S EVERGREEN LAWN GRASS.

FARQUHAR'S EVERGREEN LAWN GRASS is a mixture of the finest American and European grasses adapted to lawn-making. The formula for this mixture is the result of life-time practical experience in making and maintaining lawns. Neither pains nor expense are spared in obtaining grasses of high vitality and purity. It is our constant aim to make Farquhar's Evergreen Lawn Grass the best, purest and most permanent Lawn Grass sold. For the formation of new lawns sow not less than 5 to 6 bushels per acre. One quart will sow a plot 15 x 20 feet or 300 square feet. For renovating existing turf use one half of this quantity. **Price per quart, 25 cents (by mail 30 cents); 4 quarts, 90 cents; peck \$1.75; bushel, of 20 lbs., \$6.00.**

R. & J. Farquhar & Co., Boston, Mass.

Wald Garden, Brookline, December 7.

Gentlemen:—It gives me great pleasure to inform you of the good results I have had with your Lawn Grass Seeds.

I have used them extensively, not only in Massachusetts but in Washington, D. C., and in St. Louis, Mo., at both of which places there is difficulty in getting good Lawns, and where the successful results from your seeds have been remarkable.

The Wald Garden in Brookline which has been so frequently described and illustrated in the leading periodicals of the country affords the very best evidence of the high quality, purity and permanence of your Lawn Grasses.

Your Mixtures for various situations and for different parts of the country, I consider especially valuable.

Yours truly,

Duncan Finlayson.

FARQUHAR'S BOSTON PARKS LAWN SEED.

This formula has been used for many years in the Boston Park Department and in the Metropolitan Parks of Massachusetts. It is unquestionably one of the best mixtures for park work or where a free growing, hard-wearing turf is desired. Sow not less than 64 lbs. per acre and in many cases 86 lbs. will be an advantage. **Price, 35 cents per lb.; by mail, 40 cents. 10 lbs., \$3.25; 100 lbs., \$30.00; 25 lbs. and upwards at the 100 lb. rate.**

FARQUHAR'S SPECIAL GRASS SEED MIXTURES.

These mixtures produce turf fit for use in the shortest possible time.

FARQUHAR'S GRASS SEEDS For FAIR GREENS.

This is composed mainly of perennial native grasses and two very important European grasses which have proven of great value for Fair-Green use. They are all of dwarf, spreading growth, forming a close velvety surface which improves from year to year if given proper care. It contains no clover, which is objectionable on account of making the surface slippery. If white clover is desired the quantity sown should not exceed one-half pound per bushel of grass seed. Sow 80 to 100 lbs. per acre. Per lb., .35; per 100 lbs., at 30 cents per lb.; per 1000 lbs. at 28 cents per lb.

Messrs. R. & J. Farquhar & Co., Boston, Mass.

Bretton Woods Golf Club, Bretton Woods, N. H.

Gentlemen:—I have used your Lawn Grasses for the past eight years and have found them of extra fine quality and entirely free from fowl seeds. Your Putting-Green Mixture is the finest I have ever seen—the greens at Bretton Woods produced from it are unrivalled.

Yours truly,

G. S. MERRITT, Prof. Golfer.

FARQUHAR'S GRASS SEEDS For PUTTING-GREENS.

The hardiest and finest low growing Grasses are contained in this Mixture. It produces a beautiful and lasting green turf calculated to withstand hard tear and wear. Quart, .35; by mail, .40; peck, \$2.00; per bushel of 20 lbs., \$7.00.

FARQUHAR'S GRASS SEEDS For TERRACES.

A mixture of strong, deep-rooted Grasses for banks or terraces. Although the Grasses are strong and deep-rooted, they will produce a fine, green, velvety surface, and also prevent washing away during heavy rains. Quart, .35; by mail, .40; peck, \$2.00; per bushel of 20 lbs., \$7.00.

FARQUHAR'S GRASS SEEDS For SHADY PLACES.

This is a mixture of extra fine grasses adapted for growing in the shade and under trees. We recommend the use of this mixture wherever other grasses, on account of shade, have failed to make a close sward. Quart, .35; by mail, .40; peck, \$2.00; per bushel of 20 lbs., \$7.00.

FARQUHAR'S GRASS SEEDS For SEASHORE.

A combination of various dwarf, deep-rooted grasses adapted for lawns near the salt water. The seeds should be sown early in the season so that the young plants may be well established before warm weather. Use at the rate of one quart for 200 square feet; 5 to 6 bushels per acre. Quart, .35; by mail, .40; peck, \$2.00; per bushel of 20 lbs., \$7.00.

FARQUHAR'S GRASS SEEDS For TENNIS COURTS.

A mixture of fine grasses only, consisting of those varieties which are adapted to produce a close, elastic turf. Quart, .35; by mail, .40; ½ peck, \$1.25; peck, \$2.00; per bushel of 20 lbs., \$7.00.

FARM AND FIELD GRASSES.

Prices Subject to Market Fluctuation.

Timothy.

Timothy or Herds Grass. *Phleum pratense*. This Grass is usually considered and treated as a short-lived perennial, and hence is the best grass to grow in a short rotation. It succeeds best on moist loams and clays naturally rich in humus or on those which have been heavily manured. It grows in loose tufts, with few short leaves, so that Red Top or Red Clover should be sown with it to furnish heavy bottom growth of leaves. Sow one-half bushel per acre if alone. (45 lbs. per bushel.) Per lb., 12 cents; per bushel, \$5.00.

Red Top. *Agrostis vulgaris*. A good permanent grass, which grows naturally in cold, wet soils. It should be grown in cultivation in similar situations. A perennial with long creeping stems and underground runners; one of the best bottom grasses bearing large numbers of fine root leaves, making it invaluable for sowing with erect tufted Grasses, such as Orchard and Timothy filling in between the clumps and producing a continuous turf. Sow four bushels per acre if alone. (10 lbs. per bushel.) Per lb., 25 cents; per bushel, \$2.25; 100 lbs., \$20.00.

Red Top. Clean Seed. Chaff and weeds sifted out; pure fancy seed. We recommend this to all who desire the best results, as its absolute purity and excellence insure satisfaction for farm, park or lawn. Excellent for restoring worn-out swards. Per lb., 45 cents; 100 lbs., \$40.00.

Kentucky Blue. *Poa pratensis*. Known as *June Grass*. A perennial especially adapted to dry limestone soils, but will thrive on any good ground which is not too wet. Very nutritious, hardy, and early. Sow three bushels per acre if alone. (14 lbs. per bushel.) Per lb., 20 cents; 100 lbs., \$18.00.

Rhode Island Bent. *Agrostis canina*. A bottom Grass, suitable for using with tufted varieties. Hardy and early and a grass that will withstand heat and dry weather. Sweet and nutritious and relished by all kinds of stock. Sow four bushels per acre if alone. (14 lbs. per bushel.) Per lb., 45 cents; 100 lbs., \$40.00.

Orchard. *Dactylis glomerata*. A deep rooted perennial, growing in tufts. A strong, vigorous grower, which succeeds best on rich lands or clayey soils. Should be cut for hay at the time of first flowering. Sow three bushels per acre if alone. (14 lbs. per bushel.) Per lb., 30 cents. Per bushel, \$3.75; 100 lbs., \$25.00.

Tall Oat Grass. *Avena elatior*. A perennial which grows in loose tufts and throws up an abundance of leaves and tall stalks. Succeeds best on rich upland soils, and when once established is a great drought resister. Early. Makes its heaviest growth the second year. Lb., 35 cents; 100 lbs., \$30.00.

Italian Rye Grass. *Lolium Italicum*. A biennial which grows in broad compact tufts, producing a large number of stalks from a single root. Succeeds best in warm, rich, moist soils. A rapid grower and a good crop to rid land of weeds, as it quickly overtops them, preventing them from ripening seeds. Sow three bushels per acre. (22 lbs. per bushel.) Per lb., 10 cents; 100 lbs., \$9.00.

Perennial Rye Grass. *Lolium perenne*. A perennial forming large and broad tufts. Grows best on stiff, wet soils, and on heavy clays or marshy lands where the soil is good, it is one of the best pasture Grasses. In such situations it will last five to seven years, but on dry upland soils it is short-lived. (22 lbs. per bushel.) Finest seed, our direct importation. Per lb., 12 cents; 100 lbs., \$10.00.

- Meadow Fescue.** *Festuca Pratensis.* A perennial which succeeds best on rich moist loams. A heavy yielder on soils perfectly adapted to it, and also an excellent pasture Grass. Sow two and a half bushels per acre. (15 lbs. per bushel.) Per lb., 35 cents; 100 lbs., \$30.00.
- Various Leaved Fescue.** *Festuca heterophylla.* Early hardy perennial two or three feet high. Valuable for permanent pasture. Thriving in high altitudes and in shady locations. Per lb., 40 cents; 100 lbs., \$35.00.
- Hard Fescue.** *Festuca duriuscula.* This splendid Grass is found in all the best lawns and permanent pastures; invaluable for dry soils; of low, dense-growing habit. Sow three bushels per acre. (14 lbs., per bushel.) Per lb., 35 cents; 100 lbs., \$30.00.
- Red or Creeping Fescue.** *Festuca rubra.* A splendid grass for light sandy soils. Extreme drought resister. Valuable in seeding banks and exposed locations, binding drifting sands, and as lawn grass for shady spots. Forms a very close, durable turf, suitable for putting greens. Lb., 35c.; 100 lbs., \$30.00.
- Sheep's Fescue.** *Festuca ovina.* Of dense growth; excellent for dry situations and sheep pastures. Sow two and a half bushels per acre. (12 lbs. per bushel.) Per lb., 35 cents; 100 lbs., \$30.00.
- Fine Leaved Sheep's Fescue.** *Festuca ovina tenuifolia.* A very fine leaved Grass, dwarf in habit. Will succeed in dry, high locations and inferior soils. Hardy and durable. Per lb., 55 cents; 100 lbs., \$50.00.
- Tall Fescue.** *Festuca elatior.* Excellent for permanent pastures on moist soils, on which it yields immensely. Cattle and stock eat it greedily. (15 lbs. per bushel.) Per lb., 40 cents; 100 lbs., \$35.00.
- Crested Dog's Tail.** *Cynosurus cristatus.* A perennial valued for its dwarf habit and its hardiness. Sow two bushels per acre. (28 lbs. per bushel.) Per lb., 40 cents; 100 lbs., \$35.00.
- Sweet Vernal, True Perennial.** Many seedsmen substitute the annual variety for this invaluable Grass, as the seed of both is similar. Invaluable in lawns on account of its very early growth and fragrant odor, which it imparts to the other grasses in drying. Remains green very late. Hardy and permanent. Per lb., 75 cents.
- Meadow Fox-Tail.** *Alopecurus pratensis.* Very valuable in mixtures for permanent pastures exposed to heat and drought; early and rapid in growth. (8 lbs. per bushel.) Per lb., 35 cents; 100 lbs., \$30.00.
- Rough-Stalked Meadow.** *Poa trivialis.* An excellent permanent Grass to mix with other varieties for moist pastures. Produces a constant supply of nutritious herbage. Suitable for growing in shade. Sow one and a half bushels per acre. (14 lbs. per bushel.) Per lb., 65 cents; 100 lbs., \$60.00.
- Wood Meadow.** *Poa nemoralis.* Well adapted for growing under trees and in shaded situations. Dwarf and fine growing. Sow two and a half bushels per acre. (14 lbs. per bushel.) Per lb., 55 cents.
- Water Meadow Grass.** *Poa aquatica.* A creeping rooted perennial, grows in alluvial marshy soils, slow running streams, margins of fresh water, lakes, etc. An excellent pasture grass for wet situations. Trout and wild duck relish the seeds and young shoots as food. Per lb., 75 cents.

CLOVERS.

- Red Medium.** *Trifolium pratense.* The best clover for all practical purposes. Succeeds best on rich warm loams, containing humus. Lime and potash are essential for its best development. A biennial, but by close pasturage may be made to last several years. Per lb., 30 cents; 100 lbs., \$25.00.
- Mammoth or Large Red Northern.** *Trifolium pratense.* On rich loamy soil this variety grows nearly twice as large as the Medium Red Clover, and earlier to start a spring growth. Per lb., 30 cents; 100 lbs., \$28.00.
- Alsike or Swedish.** *Trifolium hybridum.* This Clover will thrive where the soil is quite wet, and will even stand flooding without being killed. Productive and sweet and extremely valuable for both pasturage or soiling. The flowers afford a fine pasturage for bees. Per lb., 35 cents; 100 lbs., \$30.00.
- White Clover.** *Trifolium repens.* This Clover should always be sown on permanent or temporary pastures. Will grow on any soil, but especially adapted to low meadows, where the surface soil is mellow and rich. Ordinarily will not last more than two years on hard or shallow soil. Sweet and nutritious. Per lb., 55 cents; 100 lbs., \$50.00.

Alfalfa or Lucerne. *Medicago sativa.* The chief merit of Alfalfa is the fact that it can be cut three or four times in a season. The soil should be deep, rich, and well-prepared. It does not succeed on compact clay, nor on land with impervious subsoil. The roots shoot downward till they are ten or fifteen feet below the surface, and will therefore resist the driest weather. Per lb., 30 cents; 100 lbs., \$25.00.

Scarlet or Crimson Clover. *Trifolium incarnatum.* This annual Clover thrives best on warm, loose, sandy soil. Its chief value is as a winter or early spring pasture crop and as a green manure. May be sown at any time from May to October. Per lb., 25 cents; 100 lbs., \$18.00.

Yellow Trefoil. *Medicago lupulina.* On very light, dry, or poor ground this variety is valuable for a sheep pasture, and can be sown alone or with other Grasses. Per lb., 30 cents; 100 lbs., \$25.00.

FARQUHAR'S SPECIAL GRASS MIXTURES.

It is a well-established fact that soils sown with a variety of different grasses which are adapted to the soil and which attain perfection at alternate months from April to September, produce very much larger and more satisfactory crops, both for hay and pasturage, than when only one or two kinds of grasses or clovers are sown. The results given by our mixtures have been most satisfactory, and have resulted in a very large increase in our trade for same. We unhesitatingly recommend them for use on the largest scale. Fall seeding is preferable, but spring sowing will be successful if done early, when the land is cool and moist. In addition to the Grasses, we advise sowing 10 lbs. of mixed Clover Seed per acre. Clovers in their young state are tender in our climate, and should therefore be sown in spring, separately, being heavier in weight.

Sand Vetch, or Hairy Vetch. *Vicia villosa.* This annual is a native of Western Asia, and has been cultivated in this country and Europe for about fifty years. Its desirability as a forage crop has become established, and it is being cultivated each year on a more and more extensive scale. It should be sown at the rate of from four to six pecks per acre, broadcast or in drills, from August 15 to October 1, and with it as a supporting crop to raise the vines up off the ground there should be planted from two to four pecks of winter Wheat, Oats, or Rye. It should be cut while the Vetch is in full bloom. It may be planted in spring in order to supply an early green crop for soiling purposes, or in midsummer for late autumn forage. Peck, \$2.00; bushel (60 lbs.) \$7.50.

Rye, Fall or Winter. The time for sowing is from the middle of August to the last of September. Prepare the ground as for Wheat and sow broadcast, or with a drill at the rate of one and one-half bushels per acre. This has no equal as a crop to be used for late fall and early spring pasture, and is one of the best to turn under for green manure. (56 lbs. per bush.) Per bushel, \$1.75; 10 bushels, \$16.50.
